

TOPOGRAPHIC BASE MAP BY U.S. GEOLOGICAL SURVEY 1968
 ENLARGED FROM 1:62,500 SCALE

REFERENCES USED TO COMPILE FAULT DATA

- NW 1/4 Bodie Quadrangle
- Bryant, W.A., 1984, Faults in Bridgeport Valley and western Mono Basin, Mono County: California Division of Mines and Geology Fault Evaluation Report FR-155 (unpublished).
- Dohrenwend, J.C., 1982, Surficial geologic map of the Walker Lake 1° X 2° quadrangle, Nevada-California: U.S. Geological Survey Miscellaneous Field Studies Map MF-1382-C.
- For additional information on faults in this map area, the rationale used for zoning, and additional references consulted, refer to unpublished Fault Evaluation Reports on file at the DMR office in Pleasant Hill.

MAP EXPLANATION

Potentially Active Faults

Faults considered to have been active during Holocene time and to have a relatively high potential for surface rupture; solid line where accurately located, long dash where approximately located, short dash where inferred, dotted where concealed; query (?) indicates additional uncertainty. Evidence of historic offset indicated by year of earthquake-associated event or C for displacement caused by creep or possible creep.

Special Studies Zone Boundaries

- These are delineated as straight-line segments that connect encircled turning points so as to define special studies zone segments.
- Seaward projection of zone boundary.

STATE OF CALIFORNIA
SPECIAL STUDIES ZONES

Delineated in compliance with
 Chapter 7.5, Division 2 of the California Public Resources Code
 (Alquist-Priolo Special Studies Zones Act)

NW 1/4 BODIE QUADRANGLE

OFFICIAL MAP

Effective: January 1, 1985

IMPORTANT - PLEASE NOTE

- 1) This map may not show all faults that have the potential for surface fault rupture, either within the special studies zones or outside their boundaries.
- 2) Faults shown are the basis for establishing the boundaries of the special studies zones. The identification and location of these faults are based on the best available data. However, the quality of data used is varied. Traces have been drawn as accurately as possible at this map scale.
- 4) Fault information on this map is not sufficient to serve as a substitute for the geologic site investigations (special studies) required under Chapter 7.5 of Division 2 of the California Public Resources Code.
