

## Language for the WZS

1. Earthquake Fault Zones:
  - A. Part or all of this parcel is within an Earthquake Fault Zone (more...)
  - B. This parcel does not fall within an Earthquake Fault Zone
2. Liquefaction Zone:
  - A. Part or all of this parcel is within a Liquefaction Zone (more...)
  - C. This parcel does not fall within a Liquefaction Zone
  - D. This parcel has not been evaluated by CGS for liquefaction hazards (more...)
3. Landslide Zone:
  - A. Part or all of this parcel is within a Landslide Zone (more...)
  - E. This parcel does not fall within a Landslide Zone
  - F. This parcel has not been evaluated by CGS for seismic landslide hazards (more...)

### **More...**

1.A. – At least a portion of this parcel lies within an Alquist-Priolo Earthquake Fault Zone. This means that if this parcel is subdivided and/or developed such that it meets the definition of a “Project” under the Alquist-Priolo Earthquake Fault Zoning Act ([California PRC, Division 2, Chapter 7.5](#)), a fault investigation by a California Professional Geologist will be required before that project can be approved by the lead agency. It also means that the presence of this zone will need to be disclosed in real estate transfers. Please refer to [California Geological Survey Special Publication 42](#) for more guidance on Earthquake Fault Zones.

2.A. - At least a portion of this parcel lies within a Liquefaction Zone. This means that if this parcel is subdivided and/or developed such that it meets the definition of a “Project” under the Seismic Hazard Mapping Act ([California PRC, Division 2, Chapter 7.8](#)), a geotechnical investigation by a California Professional Geologist or Licensed Civil Engineer will be required before that project can be approved by the lead agency. It also means that the presence of this zone will need to be disclosed in real estate transfers. Please refer to [California Geological Survey Special Publication 117A](#) for more guidance on Seismic Hazard Zones.

2.D. - This parcel and surrounding area have not been evaluated for either soil liquefaction or earthquake-induced landslides for one of the following reasons: 1) the area is not developable for significant structures for human occupancy; 2) the area is not anticipated to experience levels of earthquake shaking high enough to generate these hazards; 3) the California Geological Survey plans to delineate hazard zones in the future but has not prepared maps as of this date.

3.A. - At least a portion of this parcel lies within a Landslide Zone. This means that if this parcel is subdivided and/or developed such that it meets the definition of a “Project” under the Seismic Hazard Mapping Act ([California PRC, Division 2, Chapter 7.8](#)), a geotechnical investigation by a California Professional Geologist or Licensed Civil Engineer will be required before that project can be approved by

the lead agency. It also means that the presence of this zone will need to be disclosed in real estate transfers. Please refer to [California Geological Survey Special Publication 117A](#) for more guidance on Seismic Hazard Zones.

3.D. - This parcel and surrounding area have not been evaluated for either soil liquefaction or earthquake-induced landslides for one of the following reasons: 1) the area is not developable for significant structures for human occupancy; 2) the area is not anticipated to experience levels of earthquake shaking high enough to generate this hazard; 3) the California Geological Survey plans to delineate hazard zones in the future but has not prepared maps as of this date.
