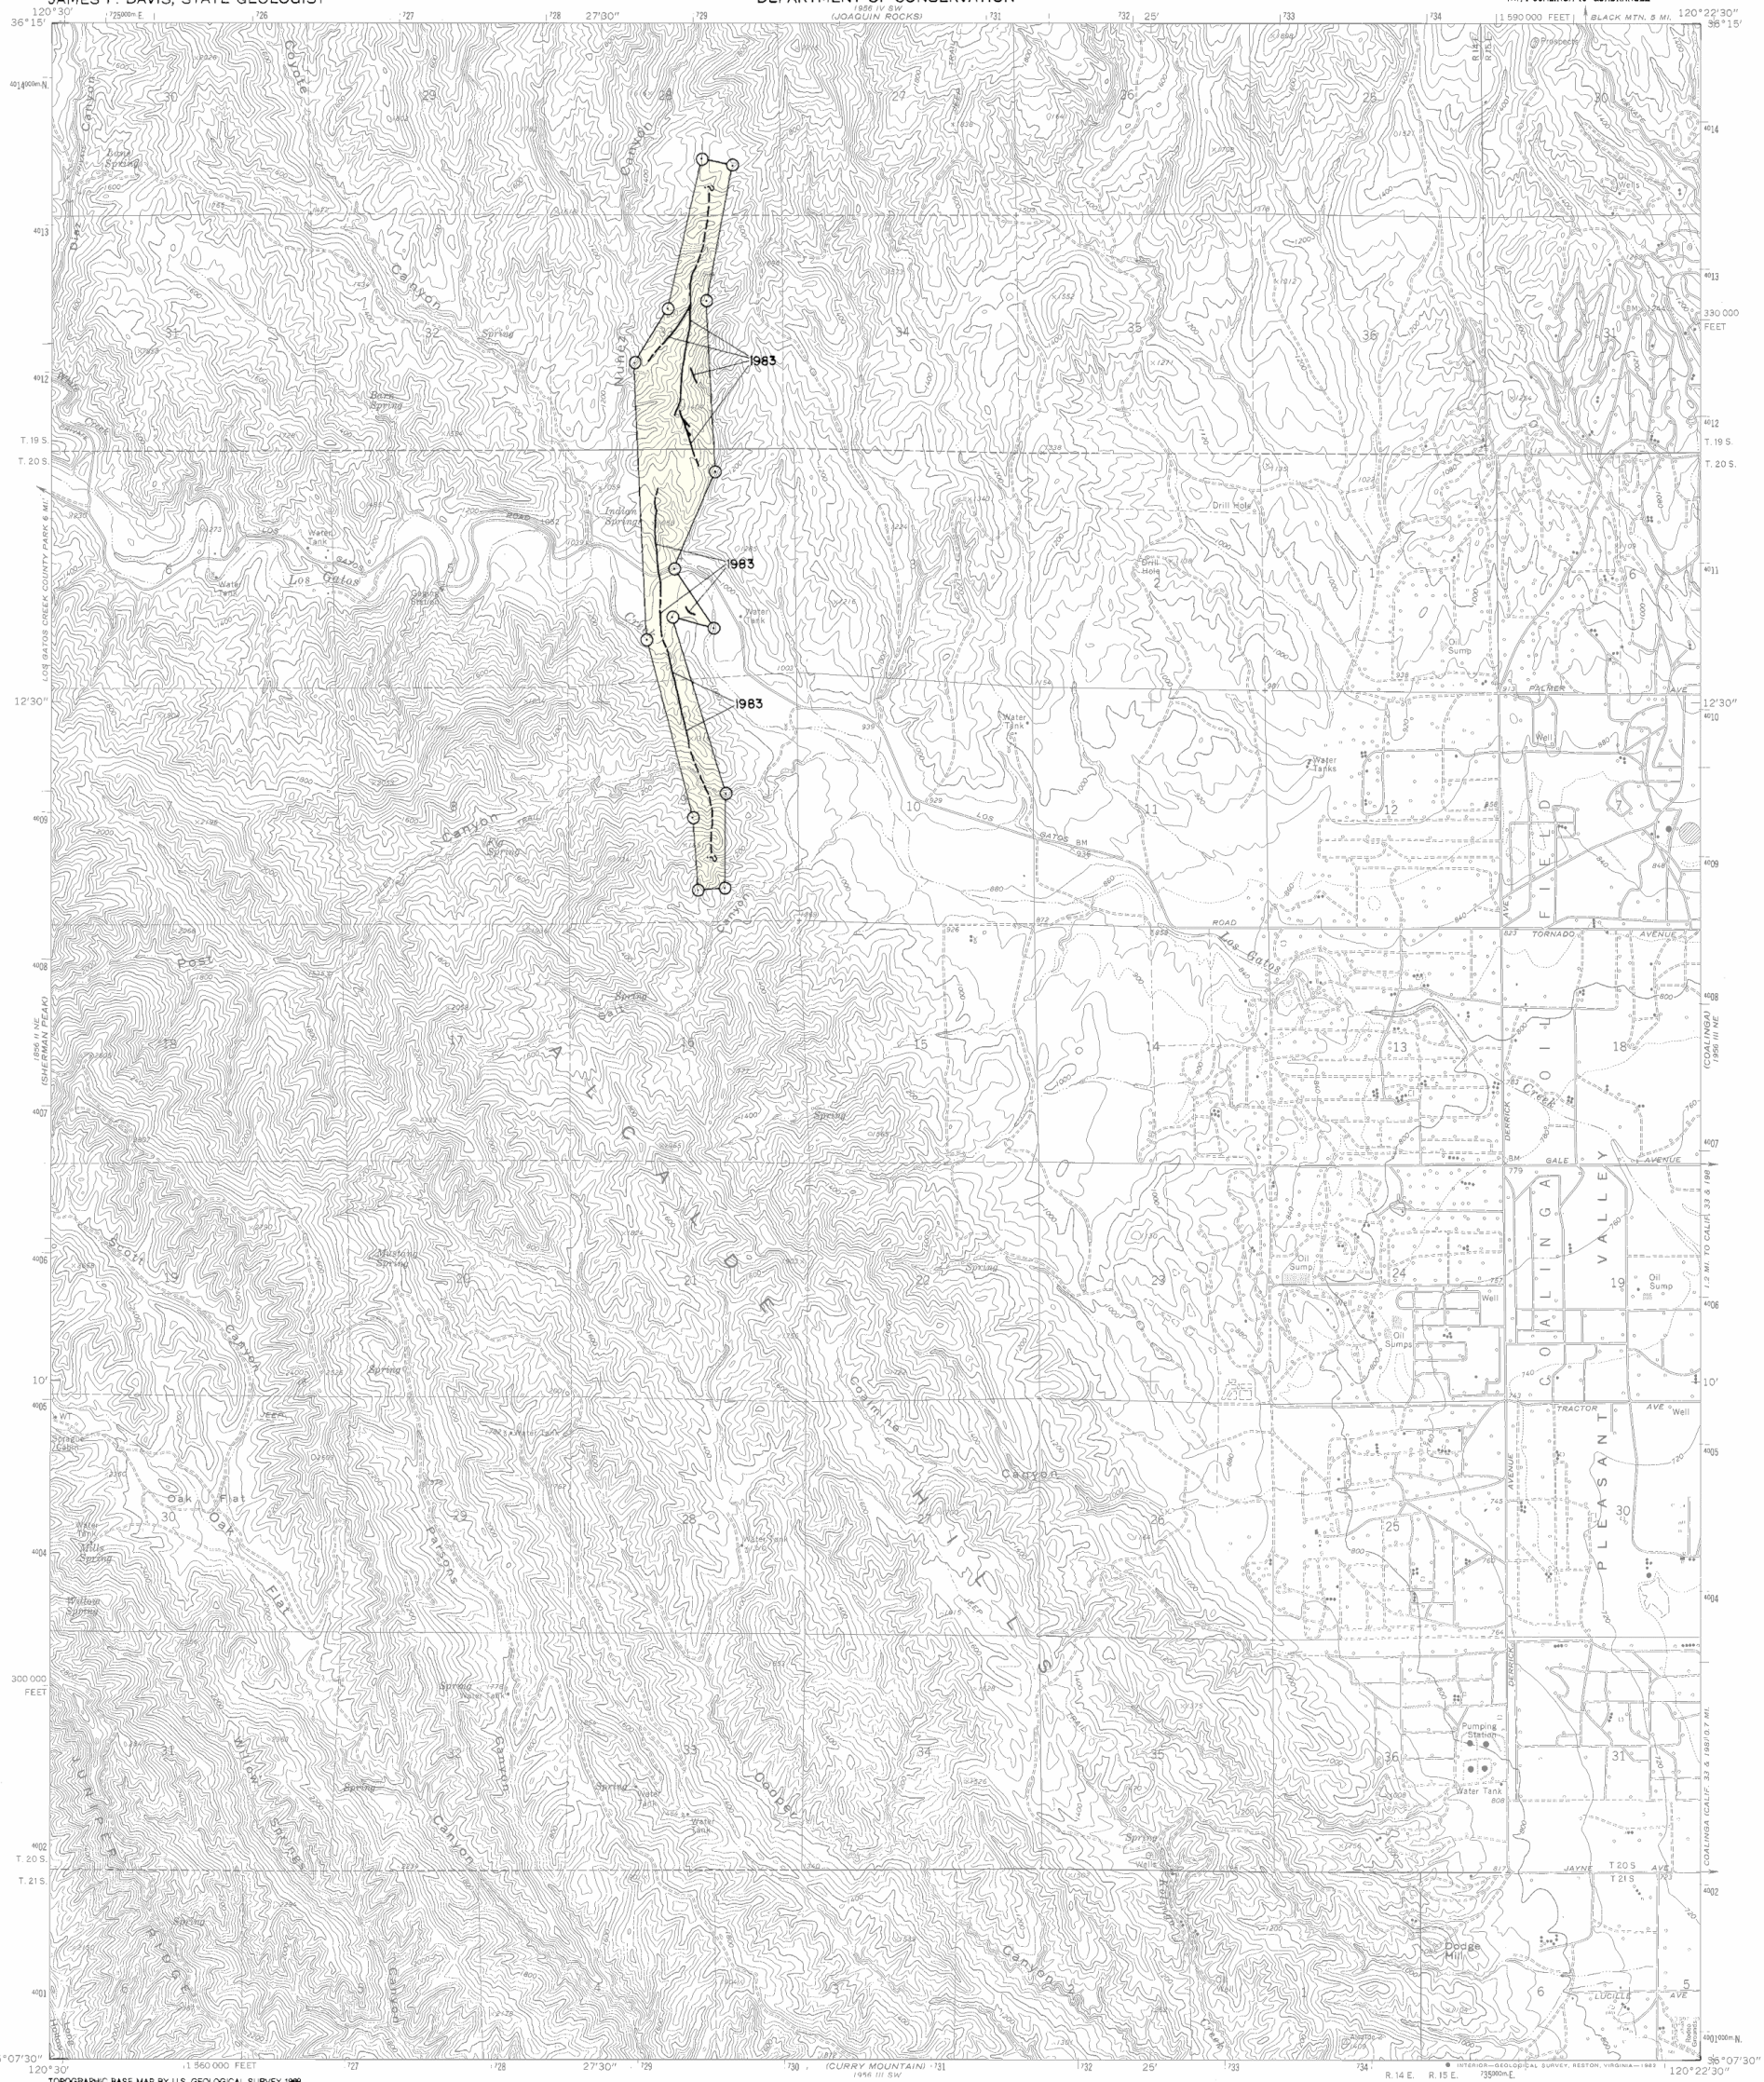
DEPARTMENT OF CONSERVATION

ALCALDE HILLS QUADRANGLE
CALIFORNIA—FRESNO CO.
7.5 MINUTE SERIES (TOPOGRAPHIC)
NW/4 COALINGA 15' QUADRANGLE



TOPOGRAPHIC BASE MAP BY U.S. GEOLOGICAL SURVEY 1969

SCALE 1:24,000

1 MILE
1 KILOMETER

CONTOUR INTERVAL 40 FEET
DASHED LINES REPRESENT 10-FOOT CONTOURS
DATUM IS MEAN SEAL LEVEL

MAP EXPLANATION

Potentially Active Faults

06 C — Faults considered to have been active during Holocene time and to have a relatively high potential for surface rupture; solid line where accurately located, long dash where approximately located, short dash where inferred, dotted where concealed; query (?) indicates additional uncertainty. Evidence of historic offset indicated by year of earthquake-associated event or C for displacement caused by creep or possible creep.

Special Studies Zone Boundaries

These are delineated as straight-line segments that connect encircled turning points so as to define special studies zone segments.

Seaward projection of zone boundary.

STATE OF CALIFORNIA
SPECIAL STUDIES ZONES

Delineated in compliance with
Chapter 7.5, Division 2 of the California Public Resources Code
(Alquist-Priolo Special Studies Zones Act)

ALCALDE HILLS QUADRANGLE

OFFICIAL MAP

Effective: January 1, 1985

James F. Davis — State Geologist

REFERENCES USED TO COMPILE FAULT DATA

Alcalde Hills Quadrangle

Hart, E.W., 1984, Nunez fault, Fresno County, California: California Division of Mines and Geology Fault Evaluation Report FER-160 (unpublished).

Hart, E.W., and McJunkin, R.D., 1983, Surface faulting northwest of Coalinga, California, June and July 1983 in J.H. Bennett and R.W. Sherburne (editors), The 1983 Coalinga, California Earthquakes: California Division of Mines and Geology Special Publication 66, p. 201-219.

For additional information on faults in this map area, the rationale used for zoning, and additional references consulted, refer to unpublished Fault Evaluation Reports on file at the DMG office in Pleasant Hill.

IMPORTANT – PLEASE NOTE

1) *This map may not show all faults that have the potential for surface fault rupture, either within the special studies zones or outside their boundaries.*
2) Faults shown are the basis for establishing the boundaries of the special studies zones.
3) The identification and location of these faults are based on the best available data. However, the quality of data used is varied. Traces have been drawn as accurately as possible at this map scale.
4) Fault information on this map is not sufficent to serve as a substitute for the geologic site investigations (special studies) required under Chapter 7.5 of Division 2 of the California Public Resources Code.
